

VINAY PEDDIREDDY

LONDON, UK | +44 7774926670 | v.r.peddireddy@se23.qmul.ac.uk | <https://vinayxd.github.io/my-voxel-site/>

EDUCATION

MSc in Computer Games Design

Sep 2023- May 2025

Queen Mary University of London

London, UK

- Fundamentals of Game Design • Computational Game Development • Advanced Game Development
- Computational Creativity • Interactive Agents and Procedural Generation • RPG Level Design

Bachelors in Computer science

Aug 2018- Sep 2024

Sathyabama University

Chennai, India

- Top 1% of 2022 computer graduate students
- **21st** Rank in All India Wide Entrance Exam

EXPERIENCE

GAME DESIGNER / DEVELOPER

Jan 2022 – May 2023

Creative Monkey Games

Coimbatore, India

- Owned feature design → implementation → polish across **8** shipped client-requested game projects within a **20**-person cross-disciplinary team, taking briefs from abstract concept to playable build.
- Designed and prototyped new mechanics by defining **player verbs, rulesets, tuning parameters, and failure states**, then converting them into shippable gameplay.
- Implemented **state-driven logic** in **Unity** (flags/triggers/conditions) to keep features stable, testable, and easy to iterate without regressions.
- Partnered with director, art, and engineering to translate creative intent into production constraints (timing, readability, feedback), refining moment-to-moment feel through rapid build reviews.
- Ran **30+** internal/external **playtests**, synthesised findings into concrete design changes, and validated improvements in subsequent sessions.
- Balanced difficulty and progression using a **player-archetype lens**, smoothing frustration spikes and improving reward clarity across varied playstyles.
- Maintained production documentation (feature notes, tuning logs, changelogs) and supported workflow via **Git + task tracking** for traceable iteration.

ASSOCIATE GAME DESIGNER

Jan 2025 – Sep 2025

Okinawa Journal (Indie)

Remote

- Partnered with the lead designer to define the game's **vision, experience goals, and tone**, then translated them into concrete design tasks and iteration plans.
- Owned **UX and playtest strategy**: designed test goals, observed player behaviour, synthesised feedback, and drove iterations to improve clarity, pacing, and emotional readability.
- Applied **player-psychology** research (motivation, attention, cognitive load) to refine choice presentation, reduce friction, and strengthen moment-to-moment engagement.
- Strengthened **Ludo narrative harmony** by aligning mechanics, UI feedback, and scene structure with narrative intent.
- Developed and refined concepts for **visual storytelling** and narration (staging, signposting, environmental cues), reducing reliance on exposition while improving comprehension.

SKILLS & TOOLS

Engines: Unity, Unreal, Godot

Relevant Tools: Blender, Articy, GitHub, Jira

Programming: C#, C++, Python, JavaScript/TypeScript

Prototyping & Web Tech: Node.js, React, WebGL (three.js / BabylonJS)

Systems Design Methods: data-driven design, procedural generation, AI systems, dynamic simulations

RELEVANT RESEARCH

Report and Presentation on Cognitive Flow: The Psychology of Great Game Design

ECS7017P

Research on Exploring Player Emotions and Experience in Game Design: Using the Circumplex and PAD Models to Guide Gameplay, Pacing, and Feedback

LEADERSHIP & COMMUNITY

Founder & President, Game Development Society

SATHYABAMA UNIVERSITY | 2018–2022

- Founded and led the Game Dev Society for 3 years, delivering 30+ events (talks, workshops, game jams) and coordinating cross-discipline collaboration.
- Launched a school outreach programme in a under developed area, applying game reward/progression systems to make learning more engaging and motivating.
